

Janz 发布新的 emVIEW 产品—工业 HMI

日期：2008-6-9

Already available in 4 display sizes

Janz is proud to present the emVIEW™ series - a versatile HMI family for industrial applications.

emVIEW™ systems are based on the well-known embedded PC emPC-A400 and emPC-M systems. Display (standard with touchscreen) attach directly to the emPC, but systems with or without display are also possible.

12.1" and 15.0" emVIEW™ systems were realized and exactly meet the needs of the customers, as well as emVIEW-6T, which uses a novel 6.5" display with LED backlight. Using emPC-A400 (XSCALE basis), we created a very low-maintenance, low-power unit (approx. 10W). Application areas include Thin Client solutions in plant installations, and very cost-effective controllers for house automation, etc.

emVIEW-8 is scheduled for Q3/2008 availability and is another member of the emVIEW™ family, with an 8.4" display.

emVIEW™ units feature one or two CAN interfaces, so existing networks can easily be accommodated. Other standard interfaces are two 10/100 MBit/s Ethernet ports, USB and VGA. These units also feature CompactFlash Card capability, but it is also possible to specify a 2.5 inch hard disk.

Operating system support ranges from Windows XP/XPe, Windows CE to Linux and RTAI.
